

“We go beyond compliance; we lead with quality”

NEW PRODUCT LAUNCH FOR IMMEDIATE RELEASE

Lewiston, Maine. February 18, 2019: Compounding Solutions, well known for developing specialty medical compounds, is launching a new tie-layer resin for the global medical device industry, ReZilok Rx, a special compound developed to be used in the production of multilayer co-extruded medical films and catheter tubing.

Compounding Solutions' R&D team has developed a linear low-density polyethylene grafted with maleic anhydride. ReZilok Rx 101 was tested and deemed ISO 109935 compliant. Compounding Solutions' ReZilok also offers excellent bond strength to numerous substrates.

“The current tie-layer resins in the market have been subject to numerous changes over the last five years coupled with the resistance of the manufacturers to offer medically approved grades. We wanted to provide a quality medical solution,” states Scott Neal, Owner & General Manager of Compounding Solutions.
